

Mootez Ben Slimen

Master's Student in Cybersecurity & Software Engineer

Ariana — +216 29 704 881 — mootez.benslimen@medtech.tn

blog.3angour.tech — LinkedIn — GitHub — GitLab

Summary

Master's student in Cybersecurity with a strong background in software engineering, CTF competitions, and Python automation. Excellence Scholarship recipient at MedTech University. Experienced in secure system development, vulnerability research, and cybersecurity event organization. Passionate about applying technical expertise and problem-solving skills in real-world security environments.

Experience

ITC-Consulting — Graduation Internship

Feb 2025 – May 2025

- Designed and implemented a Vulnerability Operation Center (VOC)
- Developed DNS traffic monitoring tools to detect anomalies and potential data exfiltration
- Built Python-based scanners to identify common CVEs in web applications
- Automated CVE aggregation, alerting, and monthly vulnerability reporting

DefensyLab — Internship

Aug 2023

- Developed a custom Sysreptor plugin using Microsoft Steampipe
- Created specialized cybersecurity report templates for assessment teams

Education

MedTech University, Tunis

Sep 2025 – Present

Master's Degree in Cybersecurity

Awarded Excellence Scholarship (75%)

Higher Institute of Computer Science, Ariana

2022 – 2025

Bachelor's Degree in Software Engineering and Information Systems

Research & Publications

AI-Driven Threat Knowledge Platform Inspired by MITRE ATT&CK Using Dark Web Intelligence

2026

- Accepted at **IEEE WETICE 2026** (34th Int'l Conference on Enabling Technologies: Infrastructure for Collaborative Enterprises), Paris
- Proposes an AI-driven platform that aggregates Dark Web intelligence and maps threat actors, techniques, and indicators to the MITRE ATT&CK framework to proactively enrich threat knowledge bases

Projects

CapAI — Founder Intelligence Platform

GitHub

2026

Hackathon Project

- Built a multi-source founder data aggregation engine (FastAPI, aiohttp, asyncio) collecting and normalizing public profiles from LinkedIn, GitHub, Product Hunt, and DEV.to into structured JSON via a modular async pipeline
- Implemented identity resolution using a multi-engine search cascade (DuckDuckGo, Bing, Brave) with GitHub API verification to auto-discover founder profiles from name alone
- Engineered 16 features from 10 Crunchbase tables (funding rounds, investor networks, founder education, milestones) and trained a LightGBM classifier predicting startup acquisition/IPO success — ROC-AUC 0.84 on 196K companies

Forgot me ? — Local-First Personal Cognitive Assistant

GitHub

2026

Built for the AIMinds Hackathon

- Built a privacy-first mobile + backend system that scans documents, images, audio, and calendar files on-device and indexes them with a local LLM (Qwen2.5-3B via Ollama) — no data ever leaves the network
- Implemented a full ingestion pipeline with multi-modal processors (PyMuPDF, BLIP, Whisper, icalendar), semantic embeddings via MiniLM, and persistent vector storage with ChromaDB
- Designed a self-verifying RAG query pipeline with cosine similarity ranking and a second LLM pass to validate answer grounding before returning results
- Developed a React Native / Expo mobile app (TypeScript) with real-time processing queue, folder scanner, memory browser, and Discord webhook notifications for extracted events

- **Stack:** FastAPI · ChromaDB · Ollama · Whisper · BLIP · React Native · Docker Compose

CTF Challenge Author

2023 – Present

- Created Web, Forensics, and MISC challenges for multiple national CTF events
- Developed advanced Python Jail and forensic challenge scenarios

Secure Web Application — OWASP Top 10 Project

2026

- Built a deliberately vulnerable Flask web application using SQLite3
- Implemented OWASP Top 10 vulnerabilities for educational purposes
- Applied SSDLC principles to identify, mitigate, and fix security flaws

Personal Technical Blog

2023 – Present

- Designed and maintained a cybersecurity-focused blog featuring CTF write-ups and technical articles

Volunteering

CTF Organization & Events

- **Cr4ck0ut CTF — Organizer & Challenge Author:** Deployed and maintained CTFd infrastructure; designed Web, Forensics, and MISC challenges, including advanced Python Jail scenarios
- **SecuriCON — Core Organizer & Technical Lead:** Co-organized a cybersecurity event with 240+ participants and international sponsors (Hack The Box, Altered Security, Security Impossible); supervised IoT Hacking, Active Directory, Friendly CTF, and Attack & Defense competitions
- **Securinets ISI — CTF Challenge Author:** Authored Forensics and MISC challenges for Guided CTF, Mini-CTF, Qualifications CTF, and Finals CTF competitions

Training & Workshops

- Delivered 4 introductory cybersecurity workshops for beginners
- Conducted hands-on Web Exploitation and Digital Forensics workshops
- Led CTF training sessions with live challenge solving

Leadership & Community Contribution

- **Securinets ISI — Team Leader & CTF Author (2023):** Mentored 20+ students in Web, Forensics, and MISC; authored challenges for Mini-CTF, Qualifications, and Finals competitions
- **Securinets SMU — Technical Leader (2025–2026):** Defined technical roadmap for cybersecurity activities; mentored members in exploitation techniques, forensic analysis, and scripting

Skills

- **Programming:** Python (Advanced), C, Java, JavaScript, PHP, Bash
- **Cybersecurity:** Web Security, OWASP Top 10, SSDLC, Network Analysis, Introductory Penetration Testing
- **Tools:** PostgreSQL, MySQL, Steampipe, Prisma ORM, Mailtrap, Docker, Git
- **Web Development:** HTML, CSS, JavaScript, Node.js, Next.js, React.js, Tailwind CSS
- **Languages:** Arabic (Native), French (Fluent), English (Professional)

Awards

- **Claw The Flag CTF:** 6th Place
- **Darkes Hour CTF:** 5th Place
- **CSAW CTF 2024:** 4th MENA Quals, 5th Finals
- **CSAW CTF 2023:** 4th Quals, 7th Finals
- **CyberMaze V3:** 1st Place
- **CyberMaze V4:** 2nd Place
- **KernelKombat:** 1st Place
- **GISAMM:** 2nd Place
- **Space Heroes 2024:** 9th Place
- **SwampCTF:** 29th Place
- **Cyber Sky Hackathon** 3rd Place
- **AIMinds Hackathon** 5th Place
